## 1. Background

Dripland Barbershop is local barbershop based in a small township in Mpumalanga called Mkhuhlu in South Africa. This business was established in 2019 and is known for providing quality haircuts, beard grooming and styling services. The main purpose of developing the website was to give the business a professional online presence and make information about its services easier for customers to access.

## 2. Problems Identified

Before the website project, Dripland Barbershop did not have a proper dedicated website. This made it more difficult for customers to find about services, prices, availability contact options and bookings. This website was therefore proposed as a way of improving the business's digital presence and customer experience.

## 3. Website objectives

The website was developed to:

- Provide information about Dripland Barbershop.
- Display availability services and prices.
- Showcase the barbershop.
- Allow customers to make enquiries and bookings.
- Provide easy access to make contact information
- Create a professional and user-friendly online presence.

## 4. Website Pages

- Home- introduction to the barbershop and featured services.
- About us- Background and information about the business.
- Services-Haircut, beard grooming, styling and children services.
- Gallery- Images showing the barbershop and its work.
- Contact and Booking- Customer contact and booking information
- Enquiry- A form where customers can submit service enquires.

## 5. Budget

The proposed website development budget is approximately R5000. This covers the planning, design, HTML /CSS development, content development, image development, testing and final deployment of the website.

## 6. Project Milestones

| Stage | Milestone |
|---|---|
| Week 1 | Research, planning and requirements. |
| Week 2 | Website structures and page design. |
| Week 3-4 | HTML/CSS development. |
| Week 5 | Adding images, services and booking forms. |

| | |
|---|---|
| Week 6 | Testing, corrections and final submission. |

## 7. Part 2: CSS Styling and Responsive Design

This project focuses on developing a professional and responsive website for Dripland Barbershop in Mkhuhlu, Mpumalanga. Part 2 focused on improving the website's visual appearance and user experience through CSS styling and responsive design. An external CSS stylesheet was implemented across the website, including a CSS reset, typography styling, CSS Grid and Flexbox layouts, colours, borders, shadows, hover effects, focus states and active states. Responsive media queries were also introduced to adapt the website layout for desktop, tablet and mobile screen sizes. A dedicated Location page was added with the Mkhuhlu address, Google Maps integration and a Get Directions link. The website uses a dark blue, gold and white colour scheme to maintain consistent branding across all pages.
